The **Obagi Blue Peel** is a medium-depth chemical peel developed by Dr. Zein **Obagi**. It can be applied in 1 to 4 layers, depending on your needs, to deeply exfoliate your skin to renew its natural clarity and tightness.

Frequently Asked Questions

What is Obagi Blue Peel Radiance?

Quick superficial salicylic acid-based facial chemical peel that exfoliates and helps improve overall complexion, and provides firmer, smoother, brighter looking skin after just one use.

How many peels do I need?

A series of 4 to 6 peels gives the best overall results.

Is it painful?

During the peel, patients may feel some discomfort or temporary burning but may take some pain relief medication beforehand to make the procedure more comfortable.

How often should I get a chemical peel?

For best results, every 4 to 6 weeks.

Are chemical peels worth it?

It is important to note that some people are more sensitive to skin treatments, like chemical peels, and may require time to heal. A chemical peel treatment is designed to shed dead skin cells, so your skin will peel over a few days, or a week; however, the results are worth it.
