Removal

# High Intensity Focused Ultra Sound (HIFU)

---

*Applied to the Face  
or Whole Body*

*Works for all skin  
colours*

*For both Men &  
Women*

*For Mild to  
Moderate Skin Laxity*

---

*FDA-Approved*

*Safe & Effective*

High Intensity Focused Ultra Sound (HIFU) directly delivers heat energy to skin and subcutaneous tissue that can stimulate and renew the skin's collagen, thereby improving the texture and reducing sagging of the skin. It literally achieves the results of a facelift or body lift without any invasive surgery or injections. Most importantly, there is no downtime.

## How it works

With the HIFU treatment, we are heating small targeted amounts of soft tissue below the surface of the skin to a level where the tissue will contract, and the body will create new collagen. To achieve a significant lifting and tightening effect, the right amount of heat is delivered to the proper depths of tissue without any damage to the surface of the skin.

According to the American Society for Aesthetic Plastic Surgery (ASAPS), HIFU and other nonsurgical alternatives to facelifts have seen a major increase in popularity over the last few years. HIFU has many aesthetic benefits including:

- Wrinkle Reduction (Slows down the development of aging signs)
- Tightening sagging skin on the neck (sometimes called turkey neck)
- Lifts and tightens the cheeks, eyebrows, and eyelids
- Enhancing jawline definition
- Treatment of Acne Scars
- Tightening of the décolletage
- Smoothing the skin

## Number of Sessions:

A small series of treatments may be needed. The uplift happens naturally by stimulating the deep structural layers of the skin. A natural and regenerative response is initiated, stimulating the growth of new collagen and better circulation which lifts and tightens the skin over time. The results will build gradually over 2-3 months and continue to improve up to 6 months after treatment.

# HIGH INTENSITY ULTRA-SOUND

## NON-INVASIVE SKIN TIGHTENING & LIFT

High-Intensity focused Ultra-Sound is a relatively new cosmetic treatment for skin tightening that some consider a noninvasive and painless replacement for face lifts. It uses focused ultra-sound energy to target the deeper layers of the skin, increasing collagen resulting in a tighter, firmer skin with fewer wrinkles and sagging.

### HIFU benefits include:

- ▶ Wrinkle reduction
- ▶ Tightening sagging skin on neck
- ▶ Lifting Cheeks, Eyebrows, Eyelids
- ▶ Enhancing Jawline definition
- ▶ Tightening of the de'colletage
- ▶ Smoothing the skin

HIFU uses focused ultrasound energy to target the layers of the skin just below the surface. The ultrasound energy causes the tissue to heat up rapidly. Once the cells in the targeted area reach a certain temperature, they experience cellular damage. While this may seem counterintuitive, the damage actually stimulates the cells to produce more collagen. The increase in collagen results in a tighter, firmer skin with fewer wrinkles. Since the high
